WHAT I DO

Platform engineering leader who turns monolithic, mission-critical systems into self-service, cloud-native platforms. At Best Western, I created a canonical reservation model that cut the time to roll out new features from months to days. At Consumer Cellular, new domains now onboard themselves with AWS guardrails and security already in place. Equally committed to developer productivity, I built an AI enablement and upskilling program around GitHub Copilot and Claude. I have increased developer capacity 2.5x since its launch. Looking to bring modern platforms and well-equipped engineering teams to an organization ready to scale both.

EXPERTISE

Platform Engineering | **AWS and Infrastructure as Code** | **Cloud-Native Architecture** | **Legacy Modernization** | **API and Microservices Design** | **Boomi Cloud Migration** | **Copilot and Claude Upskilling** | **Jira to GitHub Issues** | **GitHub Actions**

EXPERIENCE

Consumer Cellular Inc.

Scottsdale, AZ · February 2026 – Present

Platform Engineering Director

Promoted to lead the transformation of Consumer Cellular's monolithic, tightly-coupled mission-critical systems, where a single failure could bring down the whole platform, into independent, observable, database-independent, and secure-by-design domains. Recruited top talent from across the organization to build out the team and execute the vision.

- Reused infrastructure and code already built for the MVNE initiative to accelerate delivery, producing foundational models outlined in the role's mandate within the first several months.
- Created an AI upskilling program for the new platform leveraging GitHub Copilot and Claude, with dashboards to monitor spend and analyze developer productivity. Developer productivity and capacity have increased 2.5x since the program launched.
- Stood up the platform's first domain slice: Customer Lifecycle and Identity as a Service.
- Automated domain onboarding end-to-end: GitHub automatically generates development issues for each new domain team while its AWS environment is provisioned automatically with the full guardrails, security, and capabilities prescribed by Enterprise Architecture.
- Required AWS, GitHub, and Claude certifications across the team, providing dedicated study time, certification materials, and weekly gamified progress tracking to ensure every team member was equipped to succeed in the new environment.

- Moved work tracking from Jira to GitHub Issues, putting the work next to the code and tightening integration with AI tools including Copilot and Claude.
- Built GitHub Actions workflows that run CI/CD, code conformance, testing, and security checks, and promote code from dev to QA to prod.

Consumer Cellular Inc.

Scottsdale, AZ · September 2024 – February 2026

IT Director, Middleware API Platform

Brought in to eliminate Consumer Cellular's reliance on outside vendors to maintain, support, and enhance the Boomi platform integrating most of its mission-critical applications, and to stand up an in-house NetSuite team for accounting. Portfolio later expanded to include Core Engineering and Developer Experience, along with account management of the SEW vendor relationship powering promotions and rate plans.

- Built in-house teams to maintain, support, and enhance the Boomi integration platform and to stand up and run NetSuite for accounting, eliminating dependence on outside vendors.
- Migrated the Boomi platform from an on-premises data center to Boomi's cloud-based solution, resolving recurring spikes and slowdowns to reliably handle close to 66.2 million transactions per month while meeting all SLAs.
- Took on account management of the SEW vendor relationship powering promotions and rate plans, and expanded the role's portfolio after six months to include Core Engineering and Developer Experience.
- Directed the Developer Experience team in building the AWS landing zone for MVNE, a project to expand Consumer Cellular's services and capabilities, using Infrastructure as Code to automate the entire build-out and ensure consistency, repeatability, and security.

BMO

Tempe, AZ · March 2021 – December 2023

Director, Technology Platform

Led two teams, the centralized API team and the content management team. Changed the culture of both teams by implementing agile, OKRs, enhanced processes, and delivering the highest value outcomes for the organization. Decreased turnover and increased hiring of staff on both teams.

- Adopted agile and improved development processes to dramatically improve team culture as demonstrated by greatly reduced attrition and turnover by 85%.
- Created and managed over 250 APIs that powered the highest value applications in the bank. For example, the Payment Protection Plan (PPP) generated nearly $500 million for the bank in its first year.
- Implemented a protocol and cadence to create and enhance new functionality for the API platform.
- Led innovation teams with the ASU Luminosity innovation labs that developed students and faculty on cutting-edge solutions that drive real business value. We created a document deconstruction platform that stored the data in DynamoDB and enhanced the meta data with generative AI.
- Launched an API governance and review program that ensured development, communication, security, and audit requirements were always met.
- Mentored and coached leaders and individual contributors to deliver the best outcomes.
- Worked across multiple business units to ensure success and meet or exceed set goals.

Best Western

Phoenix, AZ · July 2020 – March 2021

Cloud First Strategist (Self Employed)

Brought in to build the team that would make a cloud first reservation platform architecture real, modernizing how Best Western integrates with property management systems (PMS). Managed onsite and offshore developers to

deliver the first implementation, targeting the Oracle property management system.

- Architected a canonical "Best Western reservation" model: a reservation enters the system in its property's native PMS format and is transformed into the canonical model, fully decoupling the platform from any single PMS.
- This decoupling cut the time to roll out new features and capabilities from months to days.
- Enabled properties with enhanced capabilities (ballrooms, receptions, weddings, and other services) to be deployed independently of the lower-cost PMS serving roadside motels.
- Recruited and led onsite and offshore development teams to build out the architecture and patterns.

Best Western Phoenix, AZ · August 2017 – March 2020

Director, Technology Management

Rearchitected the entire reservation delivery system to a cloud first reservation platform. This platform is designed to extend the reach and capabilities for almost any property management system. In addition to driving highest value systems to the cloud, I developed and mentored leaders in DevOps, quality engineering and architecture.

- Developed a strategy and architecture to reimagine the entire reservation delivery system as a cloud first platform.
- Reduced turnover, increased hiring, implemented strong agile practices, and created a culture of high performance while delivering the highest value outcomes for the organization.
- Transformed the QA team of manual testers to a QE team of automated testers.
- Worked with application owners to architect and troubleshoot applications in AWS for disaster recovery.

Best Western Phoenix, AZ · August 2015 – March 2017

Senior IT Manager

Deconstructed and modernized the website by breaking up the monolith into web service APIs and introduced a content management system. This new platform allows development and business to rapidly iterate and provide booking capabilities while using A/B testing to increase revenue.

- Increased revenue by $250 million by reducing downtime, delivering features, and working with e-Commerce for a consumer driven experience. By performing A/B testing, we were able to identify the most effective calls to action and color palettes.
- Transformed the www.bestwestern.com website from a monolith into a modern platform using a content management system and microservices.
- Created and leveraged a suite of API web services inside Adobe AEM producing and consuming JSON.

Best Western Phoenix, AZ · August 2011 – August 2015

IT Architect

Built the core patterns and structures for the 140+ microservices and RESTful web services that power the website, mobile apps, and call center. Modernized the legacy systems to a modern architecture to capitalize on horizontal growth. Updated and removed Oracle forms and stored procedures where reasonable.

- Developed a strategy for RESTful web services and microservices as our core business engine.
- Created the core patterns, code coverage, pipelines, standards and build tools leveraging DevOps where possible for Best Western.
- Worked closely with all the development teams to refactor JSP/stored procedures and adopt new architectural patterns. This allowed the business to deliver value faster.

- Created new revenue streams for Best Western Rewards and other business verticals.

NOVAHEAD, INC.

Phoenix, AZ · January 2001 – January 2009

Chief Technology Officer

Created this company as one of 3 founders. The company focused on developing a next generation software application that was often used as middleware for large organizations in the military and defense contractors.

- Built and led a development team to deliver on the software's technical capabilities, remaining an active, hands-on contributor to the codebase alongside the engineering team.
- Leveraged xPonential, an XML-based integration platform built by a co-founder, to deliver for Raytheon: preserving the familiar DOS-based interface users relied on while migrating the backend to a cloud-based, Oracle-powered system.
- Proposed to the Florida National Guard that the Snow Goose program support disaster recovery missions, adding camera systems, radio restoration capability, and eyes-on-target reconnaissance.
- Partnered with the CEO to secure investor funding and keep the company executing on projects for close to eight years.

EDUCATION

University of California, Santa Barbara

Bachelor of Arts, Law and Society
